

Here are my responses regarding your 2nd review:

For comment #1: The device contains a single main board with top & bottom photos as presented.

For comments #2, 3 & 5: An updated Operational Description has been added to the filing.

For comments #4 & 7: Updated test reports Part 1 Rev2 and part 2 Rev 2 have been added to the filing.

For comment #6: Since the transmitter module is manufactured by a 3rd party, the grantee is unable to provide details about the crystal's tolerances. However, since the module was certified and carries an FCC ID, requirement of sec. 15.407(g) has been met. Normal operation conditions (temperature and voltage) for the device are the same as for the module.

Best regards
